

WHAT TO DO IF A NEEDLE STICK OCCURS

- Stay calm.
- Encourage the wound to bleed (gently squeeze).
- Wash the area with soap and running water as soon as possible.
- Apply an antiseptic and an adhesive bandage.
- Visit your local doctor or hospital emergency department promptly; they will manage testing and any vaccination and/or medication.
- Still dispose of the syringe safely as outlined on opposite page. Testing of the syringe is usually not possible, so there is no need to keep the syringe.

CLEANING UP **SYRINGES**

saltlakehealth.org

It is important to take proper precautions when cleaning up items that could contain infectious material, such as syringes.

NECESSARY EQUIPMENT

- Disposable latex, vinyl, or nitrile gloves
- Needle-nose pliers
- Sharps container
 - Sharps containers are available inexpensively at medical supply stores or most pharmacies
 - You can also use a rigid, plastic container with a tight-fitting cap, such as an empty liquid detergent bottle

CLEANUP STEPS

1. Put on disposable gloves. Gloves will not prevent an injury but will be a clean barrier between hands and the syringe.
2. Bring your sharps container to the discarded syringe; do not walk with the syringe to the container.
3. Place the container on the ground or flat surface beside the syringe. Do not hold or ask another person to hold the sharps container.
4. Using the needle-nose pliers, pick up the syringe by the middle of the barrel. **Do not attempt to recap the needle**—this is how

most accidental needle stick injuries happen. (The cap is usually bright orange and can be disposed of separately.) Do not break, bend, or otherwise try to render the syringe useless. Do not crack the barrel or flick the syringe. Do not use a dustpan and broom to “sweep up” the syringe.

5. Place the syringe in the sharps container, sharp end first. Keep the sharp end of the needle facing away from you at all times.
6. Dispose of sharps containers in one of the public syringe disposal boxes listed on next page or securely close the lid and wrap the container with duct tape (so it is not easily

reopened) and place the container in your regular waste bin.

7. Remove gloves carefully so any contaminated surface does not come into contact with your skin. Dispose of gloves in your waste bin.
8. Wash your hands properly with soap and warm, running water for at least 20 seconds.

SYRINGE DISPOSAL BOXES

- 405 South 200 East (Salt Lake City Main Library)
- 395 South 400 West (Pioneer Park)
- 245 South Rio Grande Street
