The **Bullock's Oriole** is one of the most beautiful migratory neo-tropical birds, and is routinely found along the river during the summer. Their interesting, hanging sock-like nests can easily be seen in riverside trees during winter after the leaves have fallen.

Stormwater flows into our streams and ends up here in the Jordan River. Let's keep it clean! To learn more about the Jordan River Watershed see: [www.watershed.slco.org/jrwc](http://www.watershed.slco.org/jrwc)

The bed of the Jordan River below the ordinary high water mark is Sovereign Land and is owned by the State of Utah, and managed through the Division of Forestry, Fire & State Lands (FFSL) for the benefit of the citizens of Utah.

They also manage the **Galena Restoration Area** which is a 250 acre site that is protected indefinitely by a conservation easement. It contains equestrian trails, and active restoration sites. It has one of the last native wet meadows along the Wasatch Front. The site has historic significance dating back to the Archaic Age. For more information see: <http://www.ffsl.utah.gov/index.php/state-lands/galena-property/galena-property-plans>

**Puncturevine (Goathead)** is a non-native plant that has invaded many disturbed areas along the Jordan River Trail. This plant is low-growing with small green leaves and yellow flowers. The spiky seeds can puncture bike tires and get stuck in your pet's paws! Numerous local volunteer groups gather each year to remove this plant from areas along the trail.

Contact the Jordan River Commission to help with the next weed pull event!

The **Bufflehead Duck** is a beautiful, common bird found on the Jordan River as they migrate through in late fall and winter. For lists of all of the common fish, amphibians, reptiles, birds, and mammals of the Jordan River go to: [jordanrivercommission.com/plants-animals-and-water/](http://jordanrivercommission.com/plants-animals-and-water/)

The trail connects to the Murdock Canal Trail (18 mi) and then onto the Provo River Trail (15 mi) which ends in Orem.

The **Fremont Cottonwood** is a tall tree with distinctive heart-shaped leaves with relatively few teeth along the margins. It provides important nesting and roosting area for native insects, and food for beavers. The tree requires periodic floods to establish seedlings on the river floodplain. For more information see: [www.treearth.org](http://www.treearth.org)

## Trail Etiquette

Help make the Jordan River Parkway trail safe for everyone by using the following guidelines:

- Be Predictable** - Travel in a consistent and predictable manner. Always look behind before changing positions on the trail.
- Keep Right** - Stay as near to the right side of the trail as is safe, except when passing another user.
- Pass On The Left** - Pass others, going your direction, on their left. YIELD TO SLOWER AND ON-COMING TRAFFIC. Use hand signals to alert those behind you of your moves. Look ahead and back to make sure the lane is clear before you pull out and pass. Pass with ample separation and do not move back to the right until safely past. REMEMBER: KIDS AND PETS CAN BE UNPREDICTABLE.
- Be Courteous** - All trail users, including bicyclists, joggers, walkers, wheelchairs, skateboarders, bladders and skaters, should be respectful of other users regardless of their mode, speed or level of skill.
- Give Audible Warning BEFORE Passing** - Give a clear signal by using voice, bell or horn before passing.
- Clean Up Litter** - Do not leave glass, paper, cans, plastic, or any other debris on or near a trail. If you drop something, please remove it immediately.
- Signage** - For your safety, pay strict heed to rules and regulations along the trail, particularly seasonal signage as conditions vary throughout the year.
